

Leak Remedial Works

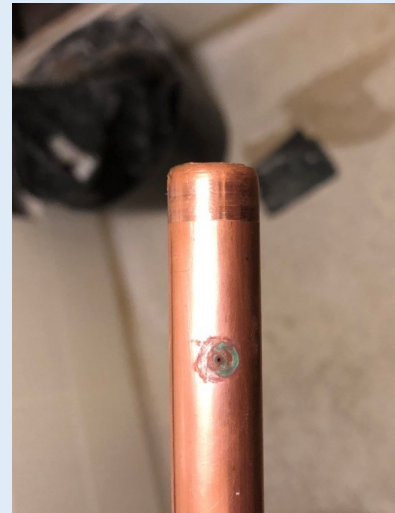

Client: Trent & Dove Housing

OnSite were contacted by Trent and Dove Housing to help with a water damaged property caused by a hidden internal leak that had eventually caused the tenant to be temporarily moved out following a ceiling collapse.

OnSite arranged an urgent response team to attend the property to locate and repair the leaking pipe. The leak was found on a copper feed located behind the shower's stud wall.

Following on from the repair, OnSite made good the damage done to the wall, ceiling and tiling. The client was very happy with the work:

"May I take this opportunity to thank you for your quick assistance with this work, and especially Alex and Adam for their exceptional approach to their work undertaken here. It has truly been a pleasure to work with them both to which they have produced an exceptional standard of work that has both impressed Trent and Dove as well as our customers directly affected by these works."
